

01 · Churn overview

How big is the leak, and is the trend improving?

02 · Churn caliber & sensitivity

What exactly is 'churn', and why 180 days?

03 · Who stays, who leaves

Which customers leave?

04 · Why they churn

What drives churn — global SHAP and per-customer TOP-1 driver.

05 · Cost of delay

What does a late delivery actually cost?

06 · Review themes (NLP)

What are customers complaining about?

07 · Causal & uplift

How much would an intervention move the needle, and for whom?

08 · Benchmark, structure & validation

How do we compare, and do the four estimators agree?

09 · Actions & watchlist

What to do, and who first?

10 · Appendix · order funnel & structure

The full funnel and the monthly customer mix.

CHURN MONITORING · 10 / 10 · APPENDIX · ORDER FUNNEL & CUSTOMER STRUCTURE

Seven funnel nodes show where volume survives and where it does not

Snapshot 2016-09 → 2018-10 · 99,992 orders · step and cumulative conversion per node

Satisfaction and repurchase are the only two real drops

Volume survives to review; satisfaction costs 21%, repurchase 96%

node_label	stage_count	step_conversion_pct	cumulative_conversion_pct
N1 Created	99,992	0.0%	0.0%
N2 Approved	99,831	99.8%	99.8%
N3 Shipped	98,185	98.4%	98.2%
N4 Delivered	96,990	98.8%	97.0%
N5 Reviewed	96,338	99.3%	96.4%
N6 Satisfied	76,033	78.9%	76.0%
N7 Repurchased	2,930	3.9%	2.9%

Only satisfaction and repurchase are real drops

Returning customers split three ways: consecutive buying is only 0.46% of buyers

How this was produced. Human-led method, AI-assisted execution. The business problem, the analysis framework, the choice of method and the validation of every result are mine; AI handled implementation and drafting. Each figure is reconciled by an automated gate before it ships, and no claim reaches a client document without a human having checked it against its source snapshot.
